

STROMA: Machine Learning Challenge

Deep Learning Model Transform to ONNX, TensorRT, and TFlite

The exportation or transformation the model to ONNX, TensorRT, and TFlite is easy to deploy.

The script of exportation:

```
python export.py --weights ./runs_fine/fine-tuning/weights/best.pt --include  
engine onnx tflite --data cv_data.yaml --device 0 --imgsz 224 224
```

For TensorRT, ONNX, and TFlite, --include engine onnx tflite respectively.
